It was played in India, Sri Lanka, and for the first time in Bangladesh. India won the tournament, defeating Sri Lanka by 6 wickets in the final at Wankhede Stadium in Mumbai, thus becoming the first country to win the Cricket World Cup final on home soil.[1][2] India's Yuvraj Singh was declared as the player of the tournament.[3] This was the first time in World Cup history that two Asian teams had appeared in the final. It was also the first time since the 1992 World Cup that the final match did not feature Australia. 2011 Cricket World CupOfficial logoDates19 February – 2 April 2011Administrator(s)International Cricket CouncilCricket formatOne Day InternationalTournament format(s)Round-robin and KnockoutHost(s)IndiaSri LankaBangladeshChampions India (2nd title)Runners-up Sri LankaParticipants14 (from 104 entrants)Matches49Attendance1,229,826 (25,098 per match)Player of the series Yuvraj SinghMost runs Tillakaratne Dilshan (500)Most wickets Shahid Afridi (21) Zaheer Khan (21)– 20072015 –Fourteen national cricket teams took part in this tournament, including 10 full members and four associate members of the International Cricket Council (ICC).[4] The opening ceremony was held on 17 February 2011 at Bangabandhu National Stadium, Dhaka,[5] and the tournament was played between 19 February and 2 April. The first match was played between India and Bangladesh at the Sher-e-Bangla National Stadium in Mirpur, Dhaka.[6]Pakistan was also scheduled to be a co-host, but after the 2009's terrorist attack on the Sri Lanka national cricket team in Lahore, the International Cricket Council (ICC) cancelled that,[7] and the headquarters of the organising committee, originally in Lahore, was transferred to Mumbai.[8] Pakistan was to have held 14 matches, including one semi-final.[9] Eight of the games (including the semi-final) were awarded to India, four to Sri Lanka, and two to Bangladesh.[10] Contents 1 Host selection 2 Format 3 Qualification 3.1 List of qualified teams 4 Preparations 4.1 Pakistan loses co-host status 4.2 Allocation of matches 4.3 Media and promotion 4.3.1 Song 4.3.2 Mascot 5 Opening ceremony 6 Prize money 7 Venues 8 Umpires 9 Squads 10 Warm-up matches 10.1 Match status 11 Schedule and results 11.1 Warm-up matches 11.2 Group stage 11.2.1 Group A 11.2.2 Group B 11.3 Knockout stage 11.3.1 Quarter-finals 11.3.2 Semi-finals 11.4 Final 12 Statistics 13 Controversies 14 In media 15 References 16 External links Host selection edit The ICC announced on 30 April 2006 which countries would host the 2011 World Cup. Australia and New Zealand had also bid for the tournament; if successful, they would have shared the hosting equally, leaving the location of the final still to be decided. The Trans-Tasman bid, Beyond Boundaries, was the only one delivered to the ICC headquarters in Dubai before the 1 March deadline, but the Asian bidders were granted an extension by the ICC.[11] The New Zealand government had given assurance that Zimbabwe would be allowed to compete in the tournament, following political discussions in the country over whether their cricket team should be allowed to tour Zimbabwe in 2005.[citat

About
Free software, open standards, and web services for interactive computing across all programming languages
JupyterLab: A Next-Generation Notebook Interface
JupyterLab is the latest web-based interactive development environment for notebooks, code, and data. Its flexible interface allows users to configure and arrange workflows in data science, scientific computing, computational journalism, and machine learning. A modular design invites extensions to expand and enrich functionality.

Install JupyterLab
Jupyter Notebook: The Classic Notebook Interface
The Jupyter Notebook is the original web application for creating and sharing computational documents. It offers a simple, streamlined, document-centric experience.
Try it in your browser
Install the Notebook
Language of choice
Jupyter supports over 40 programming languages, including Python, R, Julia, and Scala.
Share notebooks
Notebooks can be shared with others using email, Dropbox, GitHub and the Jupyter Notebook Viewer.
Interactive output
Your code can produce rich, interactive output: HTML, images, videos, LaTeX, and custom MIME types.
Big data integration
Leverage big data tools, such as Apache Spark, from Python, R, and Scala. Explore that same data with pandas, scikit-learn, ggplot2, and TensorFlow.
A multi-user version of the notebook designed for companies, classrooms and research labs
Pluggable authentication
Manage users and authentication with PAM, OAuth or integrate with your own directory service system.
Centralized deployment
Deploy the Jupyter Notebook to thousands of users in your organization on centralized infrastructure on- or off-site.
Container friendly
Use Docker and Kubernetes to scale your deployment, isolate user processes, and simplify software installation.
Code needs data
Deploy the Notebook next to your data to provide unified software management and data access within your organization.
Learn more about JupyterHub
Voilà: Share your results
Voilà helps communicate insights by transforming notebooks into secure, stand-alone web applications that you can customize and share.
Try it in your browser
Install Voilà
Currently in use at
Open Standards for Interactive Computing
Project Jupyter promotes open standards that third-party developers can leverage to build customized applications. Think HTML and CSS for interactive computing on the web.
Notebook Document Format
Jupyter Notebooks are an open document format based on JSON. They contain a complete record of the user's sessions and include code, narrative text, equations, and rich output.
Interactive Computing Protocol
The Notebook communicates with computational Kernels using the Interactive Computing Protocol, an open network protocol based on JSON data over ZMQ, and WebSockets.
The Kernel
Kernels are processes that run interactive code in a particular programming language and return output to the user. Kernels also respond to tab completion and introspection requests.
